Testicular Torsion Operations Center

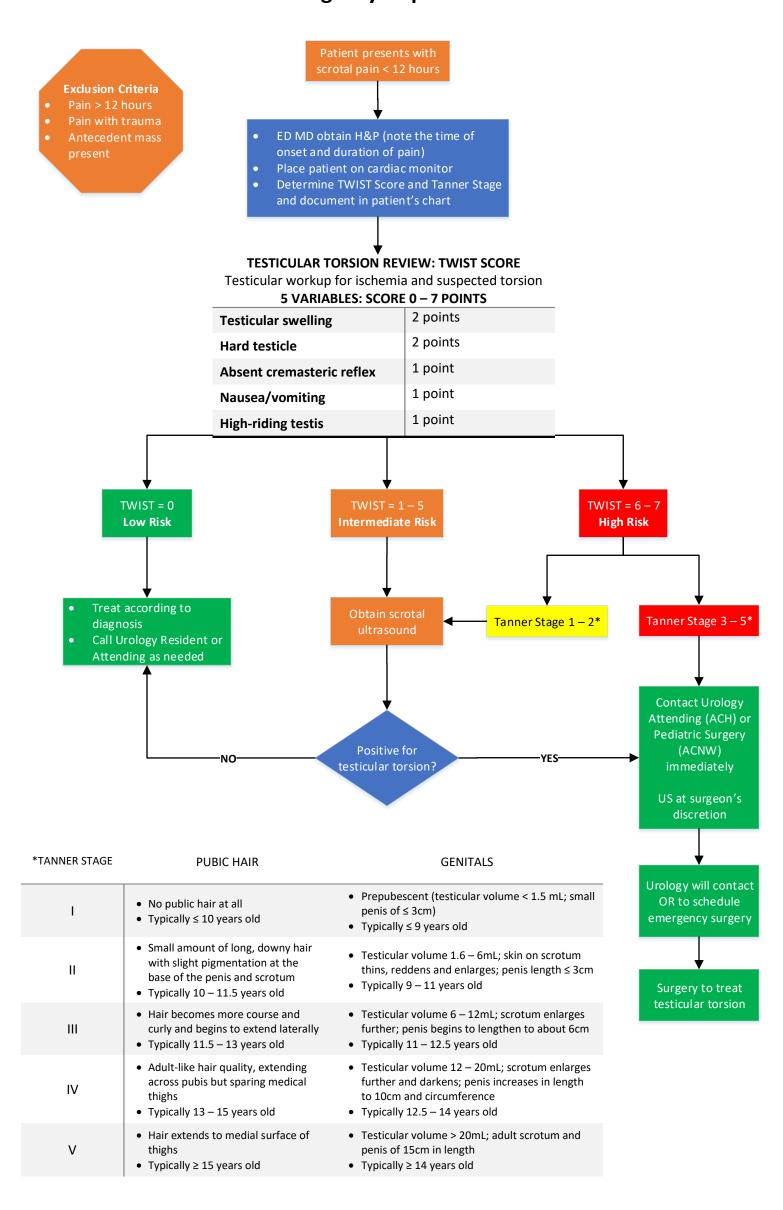

Disclaimer: This clinical pathway is provided as a general guideline for use by Licensed Provider's (LPs) in planning care and treatment of patients. It is not intended to be and does not establish a standard of care. Each patient's care is individualized according to specific needs.

*TANNER STAGE	PUBIC HAIR	GENITALS
I	 No public hair at all Typically ≤ 10 years old 	 Prepubescent (testicular volume < 1.5 mL; small penis of ≤ 3cm) Typically ≤ 9 years old
II	 Small amount of long, downy hair with slight pigmentation at the base of the penis and scrotum Typically 10 – 11.5 years old 	 Testicular volume 1.6 – 6mL; skin on scrotum thins, reddens and enlarges; penis length ≤ 3cm Typically 9 – 11 years old
III	 Hair becomes more course and curly and begins to extend laterally Typically 11.5 – 13 years old 	 Testicular volume 6 – 12mL; scrotum enlarges further; penis begins to lengthen to about 6cm Typically 11 – 12.5 years old
IV	 Adult-like hair quality, extending across pubis but sparing medical thighs Typically 13 – 15 years old 	 Testicular volume 12 – 20mL; scrotum enlarges further and darkens; penis increases in length to 10cm and circumference Typically 12.5 – 14 years old
V	 Hair extends to medial surface of thighs Typically ≥ 15 years old 	 Testicular volume > 20mL; adult scrotum and penis of 15cm in length Typically ≥ 14 years old

Testicular Torsion Emergency Department

Metrics

1. Maintain the average time from registration to OR start time to 3 - 3.5 hours
