

Study for Infants 28 Days up to 1 Year Who Have a Family History of Allergies, Eczema and/or Asthma

What

A study to look at whether giving specific bacteria to infants with a small amount of breastmilk, formula, or other milk product (cow's milk, goat milk, soy milk, almond milk, oat milk, etc.) may help prevent and treat allergic diseases

Who

Healthy infants 28 days to 1 year who are at risk for developing allergic disease due to a family history may be eligible. One of the baby's biological parents or siblings must have a history of asthma, seasonal allergies, atopic dermatitis (eczema) or food allergy.

Pay

Up to \$150.00
